

Frost Fighter® 2320 Uni-Con Connector Instructions

Uni-Con Part No. 2720
Master Kit Part No 2700

www.frostfighter.com

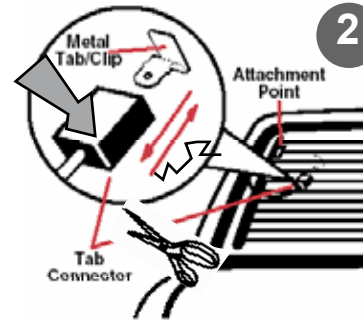

The Frost Fighter Uni-Con Kit replaces lost or broken automotive rear window defroster connectors. When main power tabs separate from the defroster these connectors can be lost or damaged.

The Uni-Con Connector Kit includes both 90° and straight connectors in black plus full instructions. Cut off the damaged connector and crimp on a Uni-Con Connector. If the metal tab is damaged or missing replace with the Frost Fighter Uni-Clip kit.

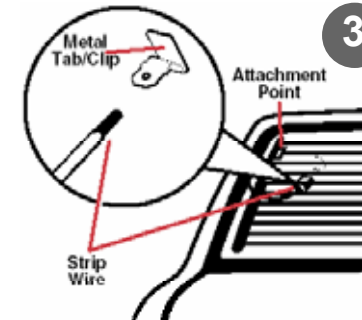

1 Locate tab connector along edge of rear window

Turn defroster off. Locate the tab connector along the side of the rear window. **The Uni-Con Connector Kit replaces lost or damaged rear window defroster connectors.** If the metal tab/clip is damaged replace it with the Frost Fighter Uni-Clip kit.

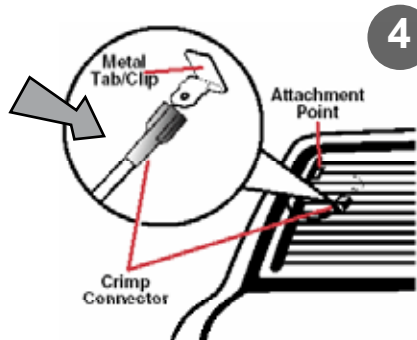

2 Remove the broken tab connector

Cut the wire leading to the damaged connector as close to the connector as possible. Wire cutters are preferred.

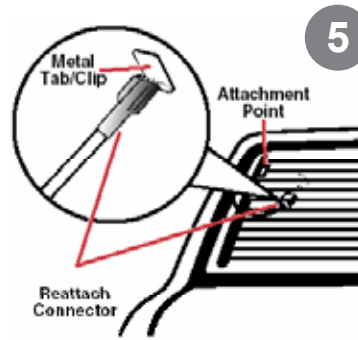

3 Strip back wire insulation

Strip back approximately 1/4 inch of wire insulation from the defroster main power wire. This is best done with a wire stripper being careful not to cut any of the wire strands.

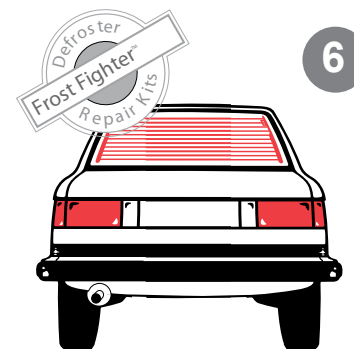

4 Insert wire in connector and crimp

Select the connector that works best for the vehicle. In some cases it will be the 90° connector. Using a wire crimper or pliers, crimp the connector to the main wire on the defroster. Be careful not to apply too much force and damage the connector

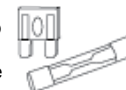

5 Reattach connector to metal tab

Reattach the main power wire to the defroster by pressing the Uni-Connector GENTLY onto the defroster tab. **WORK THE CONNECTOR ON SLOWLY AND DO NOT FORCE IT!** Turn on and test the defroster.

6 Troubleshooting tips

Once the connector has been replaced the defroster should work properly. If not, be sure check the fuses. If the fuse checks out then visually inspect the metal tab/clip to see if it is making a good connection with the defroster grid.
